Product Description:

Super Stroke Traxion Claw 2.0 Putter Grip

Reinvent your short game routine by fitting your putter with a Super Stroke Traxion Claw 2.0 Putter Grip. Designed to create a more vertical, locked in feeling at address, the Traxion Claw incorporates a pistol top hand profile with three guides at the bottom to facilitate a "claw" putting stroke. No Taper Technology utilizes a parallel design to create a uniform lower hand profile for minimized grip pressure. Traxion Control and Spyne technologies combine to enable proper hand placement and consistency.

CLAW | Minimize Wrist Action:

Unique design incorporates a pistol top hand profile and three guides on the sides in the bottom hand

Designed to create a more vertical, locked feeling at address by aligning the upper wrist with the putter while reducing wrist action in the bottom

Neutralizing wrist action helps to activate the larger shoulder muscles during the stroke to improve consistency of squaring the face at impact

TRAXION CONTROL | Enhanced Feedback Zones:

Advanced surface texture designed for enhanced feedback
Strategically designed Traxion zones on the tacky polyurethane outer layer to provide comfortable feel and increased confidence

NO TAPER TECHNOLOGY | Even Grip Pressure:

Patented No Taper Technology creates even grip pressure for a more consistent stroke

Parallel design has uniform lower hand profile to minimize grip pressure and maintain putter head path for a more consistent stroke

SPYNE TECHNOLOGY | Repeat Hand Position:

Advanced Spyne Technology is specifically engineered to aid in repeatable hand positioning

Repeatable hand placement leads to greater consistency in squaring the putter face at time of impact during the stroke

TECH-PORT | Advanced Putting Performance:

Designed to accept all Super Stroke "Tech-Port" accessories, including the CounterCore weight system

CounterCore weighting in the butt end of the grip engages larger muscles for a more stable, repeatable stroke

Utilizing such muscles helps reduce putter face angle rotation caused by wrist manipulation while improving stroke path for consistency
